

Organicare 'Brighter Tomorrow' Microderma Oxygenation Activator

Taking traditional microdermabrasion to the next level, this microderma oxygenation treatment provides a targeted burst of oxygen to the upper layer of the skin. It immediately brightens and lightens while visibly relaxing the appearance of fine lines. This powerful two-step process increases cell turnover to eliminate dullness and provide an instant glow. Aloe vera leaves skin soft, supple, and conditioned.

Directions for use: Apply a teaspoon amount of mask to cleansed, moist face. Gently massage into skin for one minute. Next apply a teaspoon of activator on top of mask and continue to gently massage for one additional minute. A warming sensation will occur as the skin is infused with the oxygen treatment. Rinse skin with warm water. Use two to three times weekly.
